Growth Session #31 - October 16 2020

Writing documentation and integrating it into our workflow

- Reducing the onboarding time for new devs
- Increases project value during handover

Goal

- Check Github actions for publishing Github Wiki
- List the topics
- Add content
- Add Github action to Rails template

MIA Admin section

The admin dashboard has its own dedicated Rails engine (`mia_admin`), providing functionalities for operation and administrating the site.

- Presents useful data about users, campaigns, payment, etc.
- Campaign management: Approving and rejecting pending campaign, creating a default campaign.
- Export a list of payouts and mark them as paid or rejecting the payout request.
- Creates and assigns voucher for advertisers.
- Displays reports that cover various metrics such as the number of active influencers, Top interests rank by the number of clicks, Revenue over time, etc.

Conclusion

- New file will automatically created a new wiki page.
- If existed file content get updated, the wiki page also get updated
- If wiki file is removed, the wiki page won't be removed. We need to manually remove in Github.
- It's better to write a documentation after big feature.

Documentation saves lives

Thanks!
