• Upgrade jekyll-sass-converter to v2.x - Sassc + sourcemaps (#7778)

In-Page Navigation

Design Process

The design process, if required for the product, has to start as soon as the project scope has been reviewed and validated by the client.

Starting earlier will only result in unnecessary changes, adding extra work (and frustration) for the designers. Starting too far after the scope validation will impact the project timeline.

The design process is composed, on average, of three orderly steps.

1. UX flow,
2. Wireframing,
3. Final UI.

After each step, a review with the client is necessary.

A new step can only be started after the previous one was accepted.

There is also additional scoping work after steps #1 and #3.
